

```
import java.util.*;
public class Main
{
    public static void main(String[] args) {
        Scanner sc=new Scanner(System.in);
        System.out.println("Enter String");
        String name=sc.nextLine();
        int l=name.length()-1;
        String words[]=name.split("\\s");
        String res="";
        for(String w:words){
            String first=w.substring(0,1);
            String afterfirst=w.substring(1,l);
            String last=w.substring(name.length()-1);
            res=res+first.toUpperCase()+afterfirst+last.toUpperCase();
        }
        System.out.println(res);
    }
}
```
